

Reverse camera installation case

Regarding car camera installation angle, different car, different installation method . also, different camera, different view angle. When you install and adjust camera position, you should know the exact and safe distance, please do not take mistake and high estimate it. Here we show instruction of Volkswagen Passat's Camera angle installation for your reference. The instruction for your reference only, it is not installation standard due to different shape in retral of car . The picture for Volkswagen Passat's camera installation position and angle. This camera installed on the top of Car code .

For further installation effect, we take one color box as barrier.

It is will ward off part of camera view angle due to bumper toward outside.

You can see the exact view angle of camera via our mainframe , it is bumper of bodywork
k under red line. As barrier of color box, close the red line position.

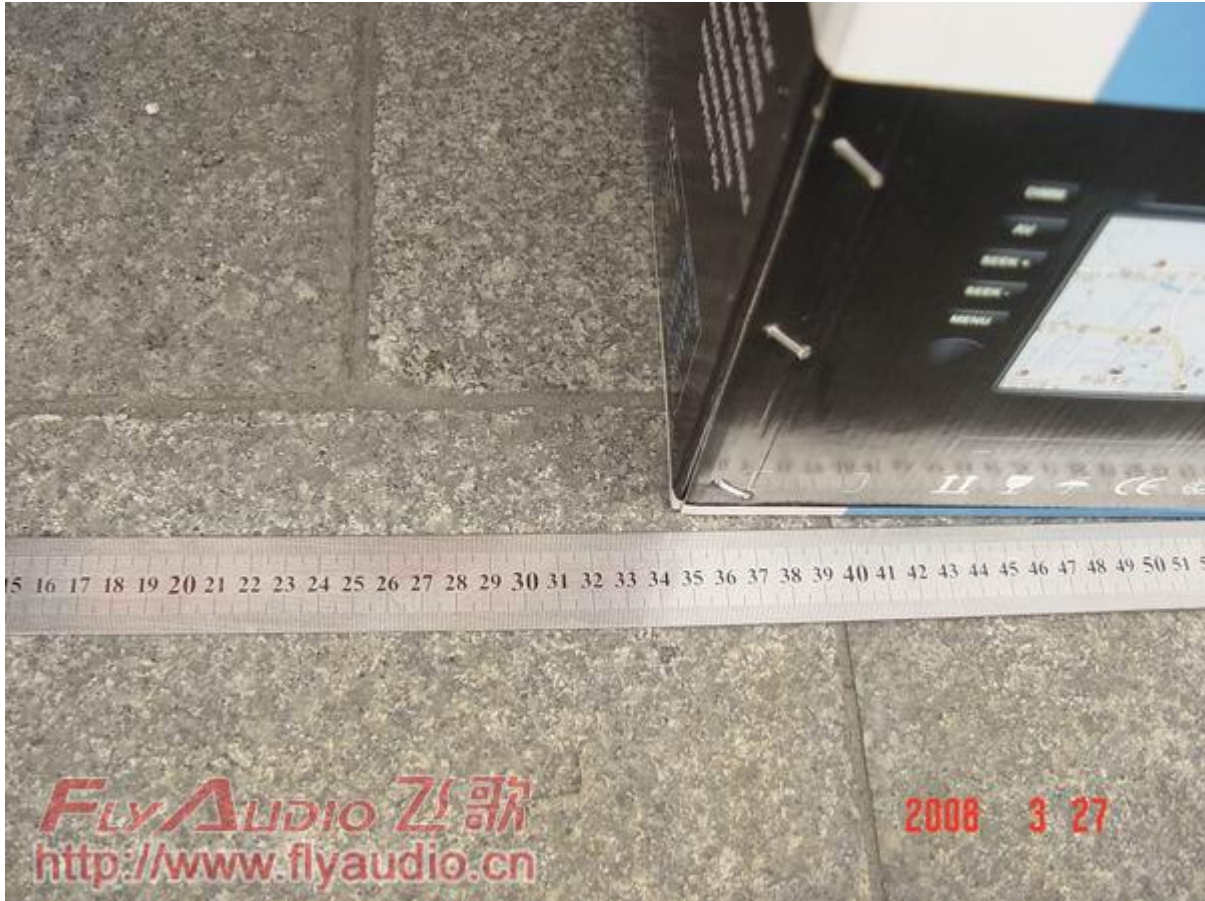

Under this shooting angle, we can measure the distance between box and bodywork.

After measurement, it is 35cm.

This distance is the lowest safe range for back a car .

The purpose of this example is to know safe distance under red line.

This example for your reference only due to different shape of car, but the safe distance standard will not change.
